FIRESTONE WALKER BREWERY CHRISTENS NEW BREWHOUSE

State-of-The-Art Brewhouse Maximizes Quality, Improves Efficiency and Enhances Brewery Visitor Experience

Firestone Walker Brewing Company announced last week that it has begun brewing beer at its new state-of-the-art brewhouse at the brewery in Paso Robles on California's Central Coast.

The new 60-barrel brewhouse reflects Firestone Walker's mission to continuously perfect the brewing process. The new brewhouse also improves the overall efficiency of the brewing process, in terms of both manpower and resources. "We elected every option possible to save on energy and water consumption without compromising the quality of our beers," said Mark Fischer, the brewery's plant engineer. "We will now be able to brew the same amount of beer using half the amount of energy as before."

The new brewhouse tower was designed by local architect Val Milosevic and incorporates design features that honor two iconic structures in the Paso Robles region—the Farmer's Alliance building in Paso Robles, and the Templeton Feed & Grain building.

Free Tours are available daily, weekends from 10:30 to 3:30 and weekdays by appointment.
