## Green Facility

**Meathead Mini Storage**  
3600 South Higuera  
San Luis Obispo, CA 93401

While revitalizing our existing building, we recycled or reused over 90% of the waste material. We are planting over 280 trees and shrubs on the property, all indigenous and drought resistant. These plants will be irrigated with recycled water.

Other sustainable building features we incorporated are LED lights, using natural lighting wherever possible, double-paned windows, and heavy insulation—all major energy savers!

We have dedicated over 20% of our 6.2 acres to open space, recognizing that the multitude of open space that San Luis enjoys is what makes it so beautiful.

To minimize our trucks' impact on this earth, we use biodiesel and have installed chips that govern the speed of our trucks at the speed at which they use fuel most efficiently and cleanly. We also encourage our employees to bike to work or carpool, and have built them a special bike storage locker.

When you move and store as much as we do, you use a lot of packing materials. We recycle thousands of pounds of cardboard yearly.
